Take control of your mobile data

Telstra Mobile Usage Management

In today's connected workplace, employees need constant access to data and applications to work effectively. To achieve this, employees have been given unrestricted access to websites at any time on their mobile device. These devices, however, are being used for both business and personal applications, and the increasing activity can sometimes cause data allowances to drain quickly from non-business type usage, but more significantly, cause compliance issues through inappropriate use.

Mature "Mobile First" companies are looking for ways to maintain the flexibility that these devices offer so employees can continue to work productively from outside the office, whilst controlling non-business activities so they are still governed by acceptable use policies and do not strain corporate data plans.

Telstra's Mobile Usage Management service offers your organisation the ability to apply real-time, consistent fair data consumption and internet usage policies for your remote users so that you can manage data consumption effectively and enforce acceptable online behaviour with intelligent content filtering rules.

How it works

With analytics and detailed reporting, Telstra's Mobile Usage Management service gives actionable insights into your data consumption, enabling you to set policies and add rules to ensure your remote users only access the sites, applications and services they need.

Key Features

Fully customisable
Set policies that apply to different groups in different circumstances, and switch devices from one policy setting to another with ease. Tailor policies by different device types or geographies.

Capping and alerts
Configure caps for when data usage thresholds are reached. Set up fully customisable, real-time alerts and notifications for all your users and admins.

Content filtering
Set rules to ensure only acceptable websites can be accessed, and that data usage is compliant with your company policy.

Compression
Tackle rising data consumption effectively. Cut usage by compressing data in real-time, without cutting down the performance or productivity.

Benefits

Eliminate excessive data usage
With real-time analytics and detailed reporting, you can get a firm grip on data consumption and help prevent bill shock by capping and limiting non-business data usage.

Control Acceptable Use and Shadow IT
By ensuring that your remote users only access the sites, applications and services they're supposed to, you will comply with any company policy on acceptable use.

Why Telstra

Telstra is a fully integrated mobility managed service provider that brings together devices, plans, security, endpoint lifecycle management, professional and managed services on Australia's best mobile network. Working with Telstra offers you a range of possibilities and options.

Access to trusted expertise
Work with Telstra's team of more than 500 skilled data scientists, DevOps, business and security analysts to help secure your business.

Benefit from the best of global technology
Telstra partners with leading security providers to make sure your business gets the best the industry has to offer.

To truly mobilise and help secure your business, contact your Telstra Client Executive.
